(54) Title: SYSTEM AND METHOD FOR DYNAMIC GENERATION OF REMOTE PROXIES

(57) Abstract

A software system is disclosed which provides for dynamic generation of remote proxy classes at run time through a distributed object management system (16). The software system provides for a client system (14) and server system (12) which communicate via distributed object management system (16) which operates over a distributed computer network to allow communications between client system (14) and server system (12). Any inter-object communication will invoke a remote proxy generation control module (34) if a remote proxy class (23) does not already exist for the requested subject object (18). A remote proxy generation control module (34) is provided which first invokes reflection engine (36) to determine the applicable information of subject class (19). Next, a communication enabling module (40) determines and inserts the appropriate computer code to allow local object (20) to communicate with subject object (18) utilizing remote proxy object (22). After the system determines what information is required by remote proxy class (23), byte code generator (42) automatically generates the executable code containing remote proxy class (23). Finally, class loader (46) loads remote proxy class (23) onto the system and creates a new instance which is remote proxy object (22).

INTERNATIONAL SEARCH REPORT

International Application No

PCT/US 99/24510

A. CLASSIFICATION OF SUBJECT MATTER
 IPC 7 G06F9/44 G06F9/46

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
 IPC 7 G06F

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	<p>"IMPROVED PROCESS FOR VISUAL DEVELOPMENT OF CLIENT/SERVER PROGRAMS" IBM TECHNICAL DISCLOSURE BULLETIN, US, IBM CORP. NEW YORK, vol. 41, no. 1, 1 January 1998 (1998-01-01), pages 281-283, XP000772108 ISSN: 0018-8689 the whole document</p> <p>---</p> <p style="text-align: center;">-/--</p>	1,8

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family
